

How to use

Oralieve Moisturising Mouth Gel

The use of a moisturising mouth gel is a new step in your oral care routine – one that can offer great benefits but may require some adjustment. Some people find the introduction of a gel into the mouth a challenge, particularly if the area is very dry or sore, however stick with it and you will feel the benefits.

Oralieve Moisturising Mouth Gel is designed to help provide lasting relief and can be used as often as needed.

STEP 01: Apply a pea-sized amount of **Oralieve Moisturising Mouth Gel** around the inside of your mouth covering the cheeks, gums and the roof of your mouth. Massage the gel fully in.

STEP 02: If your lips are dry or cracked, apply **Oralieve Moisturising Mouth Gel** to the affected areas for instant hydration.

If you wear dentures, apply a small amount of **Oralieve Moisturising Mouth Gel** underneath the dentures to help provide moisture on your palate, retain your denture and prevent any sore spots.

For end of life or patients on continuous oxygen: Regularly inspect the oral cavity and remove any secretions before application of **Oralieve Moisturising Mouth Gel**.
